

**BM 7363: HOLY FAMILY COLLEGE OF
HEALTH SCIENCES CLASSROOM BLOCK
CONSTRUCTION FINAL REPORT**

26 August 2026

FINAL REPORT

Project Title: Construction of a Two Fifty-Seater Classroom Block

Reporting Date: 26th August 2026

Donor: The Beit Trust

1. Introduction

This is the final report on the construction of a two fifty-seater classroom block at Holy Family College of Health Sciences. The purpose of this report is to inform The Beit Trust of the completion of the project, and thank the Beit Trust for the support rendered to the college for the construction of this classroom block.

2. Summary of the project

The project commenced on 17th February 2025, following signing of the contract with the selected contractor, Mwanakhu Building Contractors. It was finalized in July, 2026. The Project Manager (Engineer) certified completion on 15th July 2026. The contractor was given a defects liability period up to 15th January 2027.

3. Project impact

In 2022, the college had 150 students in three cohorts of one program (Nursing and Midwifery Technician). Students were recruited basing on classroom and hostel space. The college then had two classrooms. Management started construction of new classrooms, and renovation of old infrastructure into classrooms. This helped to increase classrooms from two to eight classrooms now. A proposal to Beit Trust assisted to construct this two classroom block. Currently the college has about 1,030 students in 15 cohorts of three programs (Nursing and Midwifery Technician, Pharmacy Assistants, and Community Midwifery Assistants).

By increasing number of classrooms at the college, Beit Trust has helped to increase number of students. This is supporting the Malawi Health Sector Strategic Plan (HSSP III) pillars 1, 2, and 4 where pillar 1 is Service Delivery whose objective is to increase equitable access to and improve quality of health care services which can be achieved with adequate and well trained human resources; pillar 2 is Social Determinants for Health, whose objective is to improve overall health, environmental health and prevent disease through addressing social determinants of health and burden of disease. These classrooms have been allocated to Community Nurse Midwife Technician program who will be responsible for achieving the strategies of this pillar like driving wellness and healthy lifestyle practices in the community and health care system. Finally, pillar 4 is Human Resource for Health whose objective is to improve the availability of competent and

motivated human resources for health for quality health service delivery that is effective, efficient and equitable; and one of its strategies is optimizing production at training institutions

3. Financial Report

Total grant received from Beit Trust was K88,719,313.10, and the college contributed K63,037,395.31, bringing total cost to K151,756,708.41. The increase came about because Malawi Kwacha was devalued causing cost of things to go up beyond the projected Bill of Quantities, so the college struggled using its internal resources to finalize the project. Find attached financial report.

4. Conclusion

Holy Family College of Health Sciences Management, on behalf of the Proprietor Archdiocese of Blantyre, and the Board of Directors, are so grateful for the support it received from Beit Trust. Although the college added its own resources with struggles, it would not have started the project if it was not for the funds that we received from Beit Trust. This project has raised our position among the Christian Health Association of Malawi Colleges. In addition, it has added to our success stories and best practices, and the college would be proud to be showcased among Beit Trust's successful projects. Our sincere thanks should go to the Beit Trust's Board of Trustees for trusting Holy Family College of Health Sciences with the funds.
